Summary

AI/ML Developer with 3+ years of experience building scalable predictive analytics and LLM-based solutions across diverse industry domains. Passionate about leveraging data-driven intelligence to enhance decision-making and accelerate business growth.

Work Experience

AI/ML Developer, Farmoid Robotech Pvt Ltd
Apr 2024 – present | Remote - Job

- AI-driven AgriTech solutions developed and deployed including — Commodity Market Price Forecasting, Crop Yield Prediction, Crop Stage Advisory, Soil Health Monitoring for Crop Recommendation and upcoming more — powering the company's Mobile App.
- Designed the Farmoid AI Chatbot ("Kisan Ke Sawalon Ka AI Jawaab") using LLM frameworks for real-time farmer assistance in regional languages.
- Led the AI/ML team through end-to-end lifecycle — from research and experimentation to deployment via Streamlit, Gradio, and Flask.
- Increased farmer profitability by 35-40% by architecting and deploying AI-driven forecasting and advisory systems.

ML Engineer, Rework AI
Mar 2023 – Sep 2023 | Remote - Internship

- Led a team to develop AI-powered HR automation tools — including Open-Source GPT/LLM-based job description generation and NLP-driven resume–JD matching systems — deployed on the company's website.
- Increased JD-matching accuracy by 25% by engineering automated NLP pipelines using LLMs to process 1,000+ resumes, validated through recruiter feedback metrics.
- Recognized by senior management for exceptional contribution and performance during the internship.

Data Analyst Engineer, Resolute.AI
Apr 2022 – Jul 2022 | Remote - Internship

- Designed and presented predictive analytics proof-of-concepts directly to the Co-Founder and senior management, influencing upcoming product features.
- Architected and deployed a predictive analytics solution that was adopted as a flagship feature on the corporate website, serving as a primary tool for client engagement.

Skills

Programming Language - Python

Time Series Analysis - Fb-Prophet, LSTM and Regressor models

LLM Frameworks - LangChain, txtai

Database - MS SQL

Libraries - Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn

AutoML - PyCaret

MLOps - MLflow, ZenML

Data Visualization - Tableau

Machine Learning - Linear Regression, Logistic Regression, Decision Tree, Random Forest, SVM, KNN, XGBoost, LightGBM, CatBoost, K-Means Cluster

NLP - BERT

Deployment (Framework) - Streamlit, Flask and Gradio

Certifications

- Advanced Certification in Applied Data Science, Machine Learning & IoT By IoT Academy (E&ICT) with IIT Guwahati
- Integrated Program in Business Analytics (IPBA) By IIM Indore with Jigsaw Academy

Education

MBAFP, International College Of Financial Planning affiliated with Mysore University
2017 – 2019
MBA specialization in Financial Planning and passed-out with 7.719 CGPA

Awards

Semi-Finalist, The Economic Times AI Hackathon 2026, Unstop and The Economic Times
2026

Finalist, TechSprint Leveraging the power of AI, Unstop and Google AI Hackathon
2026

Top 10 Runner-Up, ReelCode's August 2025 Project-A-Thons, Unstop and Reelcode
2025

Finalist, Airothon 2025 - Agentic AI Hackathon, Unstop and Airo Digital Labs
2025

Projects

Financial Independence, Retire Early (FIRE) Path Planner — The Economic Times AI Hackathon 2026

- Combined financial rule-based scoring, FIRE calculations, and LLM-powered intelligence to transform raw financial inputs into personalized retirement strategies — helping users assess financial readiness, identify risks, optimize investments, and build an actionable path toward financial independence.
- Built an interactive Gradio-based FIRE planning application integrating readiness assessment, goal-based SIP planning, dynamic asset allocation, and investment gap analysis.
- You can explore the prototype here **Github repo**

E-commerce – AI Cart Recovery Agent, ReelCode's August 2025 Project-A-Thon

- This prototype uses customer analytics and predictive modeling to identify high-risk users and re-engage them with personalized offers and reminders.
- With a Gradio interface, businesses can segment users, predict cart abandonment, and use AI to turn hesitation into conversions.
- You can explore the prototype here **Github repo**

Insurance - Customer Value Enhancement, Airothon 2025 - Agentic AI Hackathon

- By combining Cluster + ML (for prediction) + LLM = Turns raw churn predictions into actionable, personalized retention strategies in seconds — helping teams boost loyalty, cut churn, and maximize customer lifetime value with explainable AI.
- Leveraged LLM for rule-based engine to generate personalized retention strategies
- You can explore the prototype here : **Github repo**

Volunteer

RAYA The Architecture of Type-1 Civilization

- Led the development of RAYA's **Human Sustainability Index**, combining time-series predictive analytics and LLM-based strategic reasoning to assess how environmental and regional factors influence human well-being and livability.
- Built a **dual-layer AI system** that forecasts future sustainability scores using Time Series/Regression models and generates **geo-targeted recommendations using Generative AI/LLM** to help identify risks and support data-driven sustainability initiatives.
